

Luke Slattery
Sr. Product Designer

HireHive

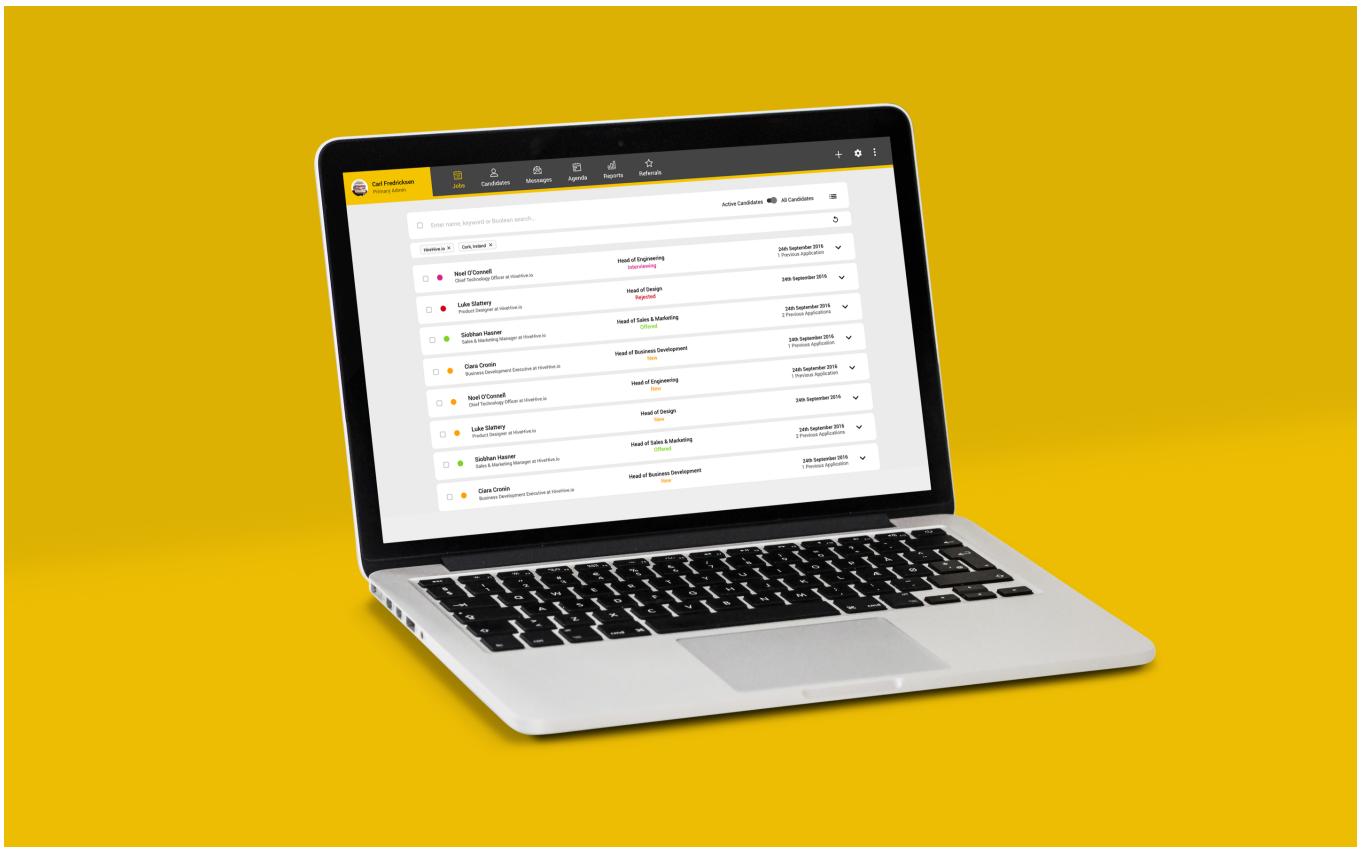

Launched in 2011 and used by companies like Lufthansa, charity:water and Mercedes-Benz, HireHive is an ATS SaaS product targeted towards internal recruiters and hiring managers.

I was tasked with addressing the many UX issues that had arisen through a number of years of changes and iterations, culminating in an entire UX and UI redesign of the application, that now places HireHive as a world class SaaS product.

Utilising usage data and customer feedback, I was able to identify UX pain points within the app and create simple, yet effective solutions that would allow users complete routine tasks faster and with ease.

Designing an interface that worked equally as well for users managing 20 candidates or 200 candidates was the main challenge of the project. This required multiple iterations of designs and user testing to ensure the best possible solution was found.

HireHive was voted most user-friendly ATS on Capterra.com in 2018 following the successful release of the redesigned app in late 2017.

Job Description

One of our American clients is looking forward to growing their team in Madrid. They're looking for a senior Front End developer who appreciates the value of teamwork in solving complex data, usability, and scalability problems. You enjoy working with robust technologies, such as Angular.js, RESTful APIs, JSON, and other web APIs. You are excited to leverage the cloud infrastructure of AWS to create new market-changing solutions, while working under a lean methodology.

WHAT YOU'LL DO:

Be a part of our next-generation cloud-based healthcare platform application team

Create a highly configurable, user-friendly platform for behavioral health care practices, agencies, and clinicians

Make possible the streamlining of administrative processes for the end-user to improve clinical outcomes

WHAT YOU'LL NEED:

At least 4 years of experience building enterprise-level solutions for consumer-focused products (bonus points if any healthcare solutions or finance systems were a part of that!)

More than 2 years of experience with modern JavaScript frameworks such as Angular, React, Ember, Knockout, or the like.

At least 3 years of experience with HTML, CSS, and Less

Experience with testing framework, such as Jasmine, Selenium, PhantomJS

Experience with GIT, Gulp, and Jenkins

Experience and success working in a fast-paced, high-intensity, rapidly-changing environment.

BILINGUAL (FRENCH / GERMAN) ADMINISTRATIVE PROFESSIONAL
 STRONG TECHNICAL AND COMMERCIAL AWARENESS

Service-oriented Administration Manager, recognised amongst peers as a strong team builder who adopts a collaborative approach with staff at all levels to exceed customer expectations. Recently improved customer satisfaction within a renowned health company having also provided a focal point for all service and process issues. Gained an appreciation as to the importance of discretion and confidentiality, underpinned by the need for equal opportunities and anti-discriminatory practices during early career in recruitment, legal, retail and health care settings. Competencies include:

- ✓ Client Liaison
- ✓ Relationship Building
- ✓ Customer Service
- ✓ Workload Planning
- ✓ Translation
- ✓ Microsoft Office suite

PROFESSIONAL EXPERIENCE AND ACHIEVEMENTS

2007 – Present ABC HEALTHY, *Braintree*
Administration Manager

Leading and developing the Administration team; motivating and engaging staff to achieve Key Performance Indicators (KPIs) while ensuring consistency in all aspects of administrative controls.

Key achievements

- Improved efficiency through the creation and implementation of a new filing system.
- Increased customer satisfaction rating by 35% having built, maintained and nurtured key client relationships.
- Prepared and distributed customer correspondence within strict deadlines.
- Dealt tactfully and diplomatically in the resolution of any arising concerns and complaints.

2000 – 2007 ABC RECRUITMENT, (HEALTH SERVICES) *Chelmsford*
Administrative Coordinator

- Coordinated office administration while promoting the consistent delivery of first class customer service.
- Organised and prioritised workloads to satisfy time constraints.

EARLY CAREER SUMMARY

1999 – 2000 HEALTHY ABC LTD, *Colchester*

What a plonker! No hope of getting approved for hire by me. Eeegit
 Noel O'Connell Feb 17th, 2017

Contacted a refer, not a great report - by all accounts take a wide berth of this one...
 Siobhan Hasner Feb 17th, 2017

Simply NO
 John Denney Feb 16th, 2017

CV looks okay, best so far, but still not great. I'm going to call this afternoon to see if they are more impressive "face to face", but not holding out much hope.

If this guy, Luke, is as bad as the rest, I vote that we just give up hiring humans and get an office dog.
 Noel O'Connell Feb 3rd, 2017

Audible

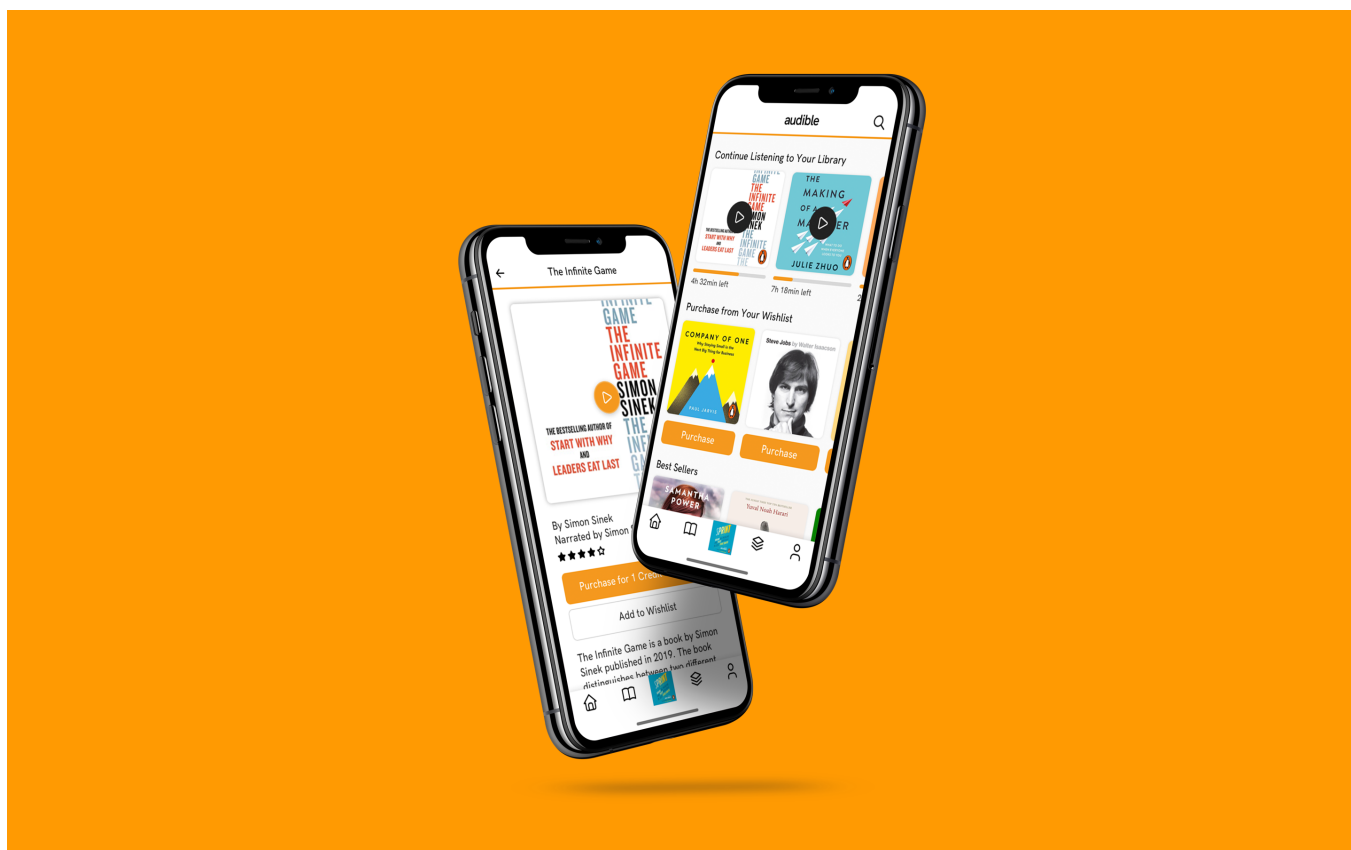

Redesign of the Wishlist & Purchasing Experience in the Audible iOS App. A project conducted in conjunction with RMIT University.

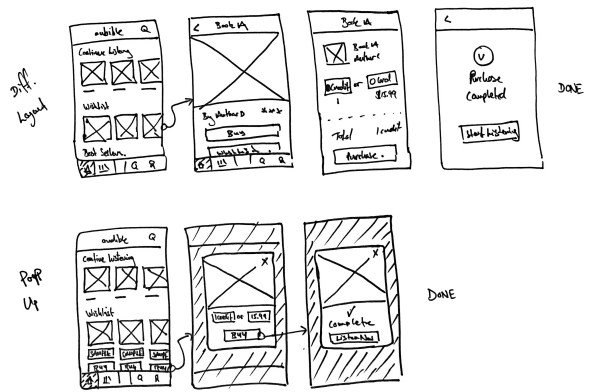

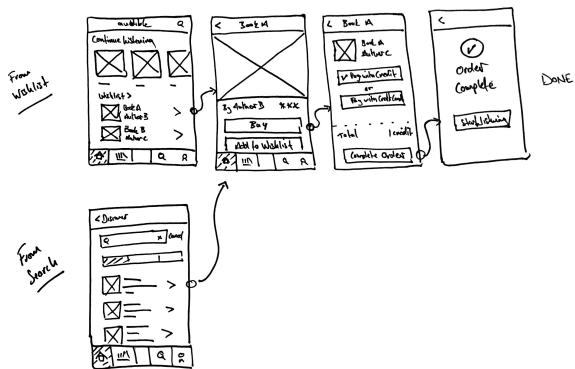

I had a hunch that users are frustrated by the buying experience in the Audible iOS app. I researched, prototyped, tested and designed a solution based on user insights and validated concepts.

Competitor and heuristic benchmarking highlighted inconsistencies and user experience issues with the app. User interviews confirmed the initial hunch and provided valuable insight in the behaviour and habits of the users while also giving context to the effects of the poor user experience in the app.

A finalised list of prioritised insights and recommendations fueled the first rounds of initial prototypes. The aim was to create a purchasing flow that is executable on a single device, within the audible app and that leverages the using of credits to make purchases for speed and ease. Also, explore the idea that the "wishlist" could act as natural entry point for the purchase flow when the user finishes an audiobook.

User tests with a click through prototype informed the final mid fidelity prototype and finished UI. The methods and processes used in the project and the resulting solution garnered much praise on final presentation for RMIT University

Arrow

Arrow is an enterprise transport app that allows employees and businesses access traditional taxi and courier services quickly and easily.

Working with a long established company looking to modernise their business, I developed a concept for a product offering that was both unique to the local market and complimented the company's existing business.

From the concept to initial app and identity design, the focus was on simplicity and clarity. An intuitive user experience and interface was developed that would allow users select collection and drop-off points and the service required with ease.
